

Create, run and manage collaborative, workflow-based applications on demand from a unified web browser screen. Feature panels are displayed in groups to perform these functions:

- § Create reusable team workflow applications
- § Run applications on demand
- § Manage schedules and team assignments for application instances
- § Create and manage team project spaces
- § Create and manage entities (data sets) and forms across applications and projects
- § Manage file and document versions and security
- § Manage community memberships and access

Panel	Function	Key Features
To-do list	Run applications	§ Select workflow tasks to perform § View delegated task status
Workzone	Run applications	§ Deliver workflow step instructions § Capture work performed § Choose workflow path options
Team Roles	Run applications	§ Assign team to workflow roles
Knowledgebase	Run applications	§ Deliver workflow step knowledge
Launcher	Run applications	§ Start workflow instance on demand
Status Report	Run applications	§ View workflow status, documents § Reassign and schedule workflow steps
Outliner	Build applications	§ Convert text to workflow
Flowchart	Build and run applications	§ Create workflow models § Execute workflow models
Palette	Build applications	§ Select icons to build workflow
Design Workzone	Build applications	§ Create workflow user instructions
Entity Relations	Build applications	§ Insert forms in step workzones
Entity Events	Build applications	§ Chain workflows, retaining context
Entity Forms	Build applications	§ Interact with data and documents
Files	Manage files	§ Save documents and objects § Manage versions and control access
Browse Entity	Manage data	§ Manage entity data and documents
Entity Fields	Manage data	§ Create data record schema
Project Page	Manage projects	§ Collaborate with project team § Manage specific workflow instances
Settings	Preferences	§ Set personal password and time zone
Community	Administration	§ Manage user access permissions
